College of Computing and Information Technology

Practicum/Capstone Student Daily Activity Report

(only starting from the week when a project was allocated to your group)

جامعة الدوحة للعلوم والتكنولوجيا
UNIVERSITY OF DOHA FOR SCIENCE & TECHNOLOGY

Student Name	Ahmed Hedyed	**Student ID**	60106275
Supervisor Name	Dr.Adnan Adnan	55563685	55563685
Degree Study Program Name	**Data Science & AI -** (College of Computing & IT)	**Week No.**	5
Project Title	AI-Driven Fraudulent Call Detection System		
Name of Group Members and Indicate the Leader	Mohammed Alsharshani (College of Computing & IT) Yousef Hadi (College of Computing & IT) Ahmed Hedyed (College of Computing & IT) Ahmed Radwan (College of Computing & IT) Ahmed Abdelrahim (College of Computing & IT) Ahmed Hedyed (College of Computing & IT)		

Notes:

- You only need to report for days when you did work on the project. It is not necessary that you report on the project for every day of the week. Our expectation is a minimum engagement of 6 hours per week.
- We understand that you may work on the project over various start and end time periods per day, and thus, in such a case, please list all the relevant time periods for the day.
- You can report your project-related activities and tasks as detailed as you want. You can include figures, tables, snapshots, or simply anything that helps you capture the work that you did.
- For project tracking, a logbook is a very important document because, after several weeks, you may not remember the details of what you did. So, consider this document as your project's "memory bank", and it will serve as a reference when you do your regular group progress report and the eventual final report.
- The logbook must be done individually. Everyone will submit their own logbook, whereas the progress report will be a summary or synthesis of the group's progress till the submission week. Progress report is a different document than the logbook. A template for the progress report will be shared.
- All logbooks should be completed and submitted by Thursday, 11.59pm of the week. This will be reviewed by the supervisor. Late submissions may be penalized.

DAY / DATE / TIME		ACTIVITIES AND TASKS PERFORMED (please include all relevant details)
Sunday and Monday	**18 & 19/01 / 2026**	• Reviewed the Capstone project scope and confirmed the transition from Practicum deliverables to Capstone development tasks. • Discussed within the team the need to initialize a new dataset for Capstone experimentation. • Identified required dataset features to support BERT-based modeling.
Start-End Time Period (s)	**8:00 pm – 10:00 pm (2 hours) each day**	
Tuesday and Wednesday	**20 &21 /01 / 2025**	• Began initializing a new dataset by organizing existing data and preparing it for preprocessing. • Reviewed label structure and data format to ensure compatibility with NLP and transformer-based models.
Start-End Time Period (s)	**8:00 pm – 10:00 pm (2 hours) each day**	
Thursday and Sunday	**22 &25 / 9 /2025**	• Performed initial preprocessing steps, including data cleaning, normalization, and label verification. • Prepared the dataset for experimentation using BERT.
Start-End Time Period (s)	**8:00 pm – 10:00 pm (2 hours) each day**	
Monday and Tuesday	**26 &27 / 9 /2025**	• Held a meeting with the supervisor, Dr. Adnan, to review Capstone progress. • Discussed the initialization of the new dataset and the planned modeling approach. • Received feedback and approval to proceed with BERT-based training and evaluation.
Start-End Time Period (s)	**8:00 pm – 10:00 pm (2 hours) each day**	
Wednesday and Thursday	**28 &29 / 9 /2025**	• Started training initial BERT models using the prepared dataset. • Conducted preliminary testing to verify the training pipeline and model configuration. • Documented early observations for future optimization.
Start-End Time Period (s)	**8:00 pm – 10:00 pm (2 hours) each day**
